Applicants' Reply filed August 23, 2005 is acknowledged. Claims 1 and 5 remain under consideration.

The finality of the last Office Action is withdrawn.

Applicants' arguments with respect to claims 1 and 5, that were rejected, respectively, under 35 U.S.C. 102(e) as being anticipated by Rosl et al., U.S. Patent 6,238,659, and under 35 U.S.C. 102(a) as being anticipated by Obrosova et al., Diabetologia (abstract), have been considered but are moot in view of the new ground of rejection.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Qiu et al., The Journal of Biological Chemistry.

Qiu teaches a method of stabilizing or maintaining the redox state of hyperproliferative human colonic carcinoma cells, cell line HCT116, by contacting said cells with chemotherapeutic agents, aziridinybenzoquinones, as required by claim 5, and a redox clamping agent, N-acetylcysteine. See page 31917, column two, under *Effects of N-acetylcysteine on Free Radical Production by HCT116 cells*. In this model involving abnormal cell growth or proliferation, redox cycling is described. The effect of N-acetylcysteine on free radical production by the quinones suggests an effective transfer of the radical character from an oxygen-centered radical to a less reactive

Art Unit: 1614

sulfur-center radical in Reaction 2; i.e., the effect is dependent on its free thiol group.

The open language of claim 1 allows for contacting other active agents to the hyperproliferative cells.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The present claims are solely directed to methods of use.

No claim is allowed.
